Sentinel Jetflush Junior

Effective easy cleaning and de-scaling for heating systems

Small in size. Big on performance.

Features & Benefits:

- Flow reversal facility
- Power flushing and de-scaling capabilities
- Internally mounted, patented submersible pump
- Compact and ergonomically designed
- Metal hose and pump connections
- Fittings pack provided
- Manufacturer's 2 year warranty
- Clear, braided plastic hoses
- Drain point for residual water in unit
- UL Approved
- Water level indicator
- In-line water proof ON/OFF switch

The new Jetflush Junior from Sentinel is ideal for jobs that involve small heating systems, such as apartments and small houses, to a maximum of 8 radiators.

SENTINEL
Water & Energy Solutions

Jetflush Junior packs a powerful punch

The Sentinel Jetflush Junior unit is designed to be used in conjunction with the Sentinel range of chemical cleaning products, for the safe and easy removal of sludge, scale and other types of debris from central heating systems and heat exchangers. It provides fast and effective cleaning of problematic, dirty and scaled up systems, quickly helping restore optimum system operation and efficiency.

The unit utilises a similar, compact version of the patented submersible Grundfos pump as used in the Jetflush 4.

The Sentinel Jetflush Junior has been designed and manufactured in conjunction with Grundfos, renowned for high quality and performance within the heating industry. It incorporates many key features required from a flushing unit, whilst the compact and lightweight design make it easier to use and handle. The unit offers the same level of reliability as that provided by the Jetflush 4, a unit that is now well respected by the industry.

SENTINEL SURVEY KIT

The Jetflush Survey Kit is designed for use in conjunction with the Sentinel Jetflush Junior residential central heating system flushing unit. It will rapidly identify where problems exist due to the build up of corrosion and scale debris and allow you to demonstrate the effectiveness of the flush once it has been completed.

- Water level indicator - provides visibility of both the water level within the unit at all times and also the clarity of the water during the cleaning and flushing process
- Drain point - allows removal of any residual water left in the unit prior to transportation or storage
- In-line On/Off control - provides an effective means of operation without the need to be present next to the unit
- Instant flow reversal
- Water supply line connection
- Simple control of heating
- Rapid removal of system scale and debris
- Compact & lightweight design
- Simple to operate
- Easily transported and stored
